

BTQ-SG8

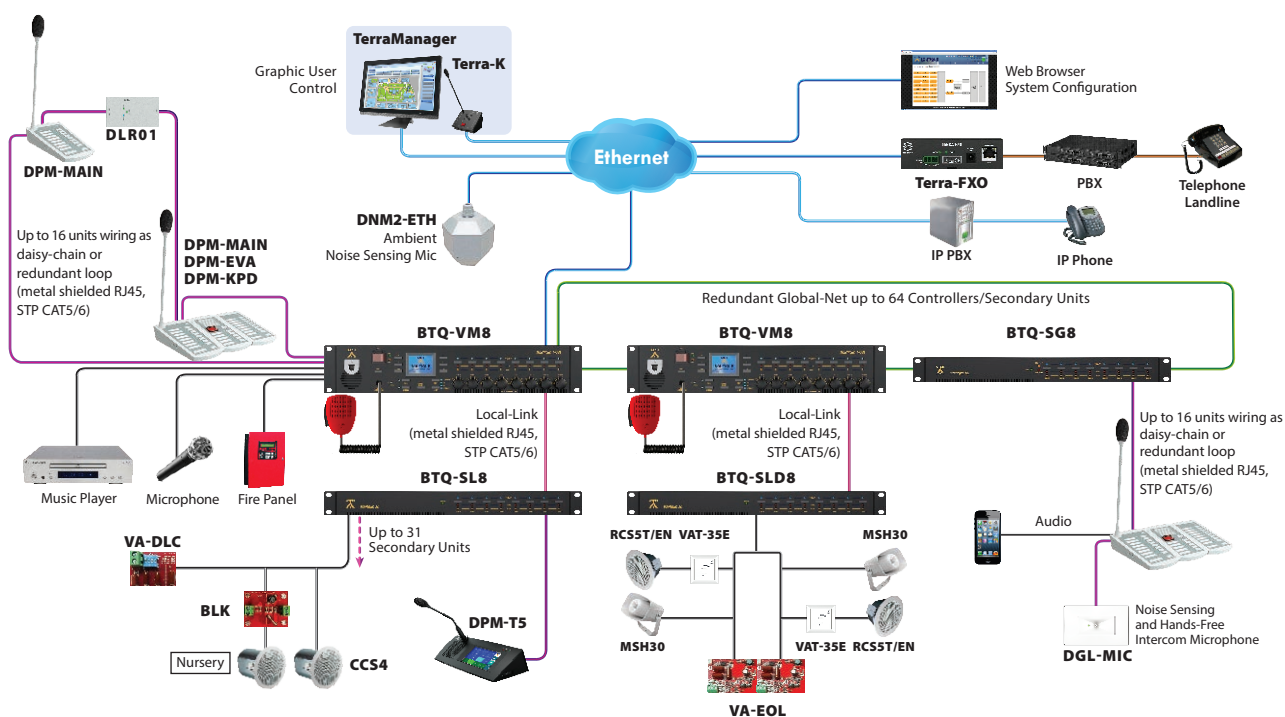

PAVA Secondary Global Unit, 8 Zones

The BTQ-SG8 PAVA secondary global unit is not only an extension unit for BTQ-VM4/8 PAVA controller but can also work independently without the BTQ-VM4/8. Up to 64 BTQ-VM4/8 or BTQ-SG8 can be networkable by full-redundancy-loop global-net via CAT5/6 cable (max. length 100m between units), multi-mode (2 km) or single-mode (20 km) fibre optic, even longer distance upon request.

The BTQ-SG8 is capable of handling 1000W speaker load per zone and 2000W max. per unit. It extends the number of input and output contacts available in the system, including 9 monitored EVAC inputs, which can be programmed to trigger either by dry contact or voltage, logic control inputs and 8 relay control outputs (configured by web browser). The two digital interfaces can connect up to 8 paging consoles or remote units for each, and be wired in a daisy chain or redundant loop. It is also equipped with a USB port for message or music files playing. In accordance with EN 54-16 requirement, all BOUTIQUE system components and peripherals are monitored from paging microphones to loudspeaker lines. The speaker lines are monitored for short, open circuit and leakage. In addition, multiple volume attenuators can be installed on a monitored speaker lines without loopback cable. The BTQ-SG8 is also an eco-friendly product with extremely low power consumption (4W) during standby mode.

The system can easily setup from the LCD panel of BTQ-VM4/8, the advanced settings can be accessed by web browser such as volume, PEQ, audio routing, monitor and control, event and bell scheduler, paging with priority management (1~99 priority level) etc. Furthermore, the BOUTIQUE contains with fully digital audio mixing and internal message storage for up to 90 minutes, USB interface to play G.711, G.722, G.726, G.727, MP3 and WAV files.

APPLICATION EXAMPLE

- Max. remotes units
 - Daisy-chain wiring
 - ♦ 16 DPM sets (DPM-MAIN + EVA + KPD) for each remote port
 - ♦ 32 DPM sets (DPM-MAIN + EVA + KPD) for 2 remote ports
 - Redundant loop: 16 DPM sets (DPM-MAIN + EVA + KPD)
- Max. DPM sets (MAIN + EVA + KPD)
 - Max. 16 DPM sets
 - ♦ 1 DPM-MAIN attaches 1 DPM-EVA and 14 DPM-KPD
 - ♦ 1 DPM-MAIN attaches 15 DPM-KPD
 - Max. 128 keys for each DPM set
 - Connection via flat cable
- Max. communication distance between BTQ-SG8 and remote unit: 250m (shielded RJ45 connector, STP CAT5/6)

* The distance of cable length will directly affect the quantity and power requirement of remote unit.

1. The longer the cable is, the less power the BTQ-SG8 can supply to the remote units.
2. The more the remote units has cascaded in daisy-chain/redundant loop, the less power the BTQ-SG8 can supply to the remote units.

For example, if the cable length between the BTQ-SG8 and DPM-MAIN is within 120m, the DPM-MAIN can be powered by BTQ-SG8. If the cable length is beyond 120m, please connect the DLR01 digital loop repeater and PSU65-27 27VDC power adapter, ensuring the control signal and power supply of DPM-MAIN units are enough. To know the max. distance between BTQ-SG8 and DPM-MAIN unit(s) and the max. distance which the DPM-MAIN can be powered by DLR01 unit, please see BOUIQUE user manual for details.
