

GB20T/ENC

This modern styled spherical loudspeaker is especially suitable for use in rooms with high ceilings. Due to the high opening angle it allows a uniform sound of the listening surface. The excellent distribution of the sound in combination with a balanced frequency response can solve many problems that arise in high rooms with a difficult acoustic environment. The ideal application of this loudspeaker is in large volume rooms with high ceilings, e.g. Supermarkets, department stores, waiting-rooms of e.g. Airports, factories, etc. This product is characterized by its excellent speech intelligibility and background music.

1) The pendulum suspension has a 5-core and tensile braided cable, which at the same time is used for power adjustment (watts). The GB 20T/ENC is suitable for evacuation announcements and is delivered without a flame (or fire) inhibiting cable.

2) To At the top of the speaker are the matching cable colors corresponding to the wattages from 20 to 2.5 watts. To change the power, take the appropriate color (black is always common) and connect accordingly.

The speaker is to be connected to the ceiling / beam in a junction box (not provided) with a braided cable with strain relief.

The anchoring must always be well secured, otherwise there is a risk of slipping of the speaker.

Cable recommendation : Fire retardant cable with strain relief, diameter between 6.5 mm to 9 mm for fitting, length upon customer requirement.
